

Investment and Decision Making

For those who need to make big decisions in the electricity industry.

Understand the implications of strategic decisions made in this complex and interconnected environment.

We will consider the uncertainty of technological, commercial and political dimensions in decision making and will arm you with different frameworks which will enable you to do this. You will develop the art of presenting business cases to senior governance bodies, learning how to be succinct without losing complexity, and how to present the reality of uncertainty and risk without baffling your audience. This is a critical skill set required by senior managers.

Course overview

4 hours of preparatory material

Upon registration participants gain access to the online resource centre where they can view videos, primers and case studies before the in class sessions.

2 full day in-class sessions

With everyone up to speed on the basics, these sessions consist of group discussions, case studies, simulations and demonstrations delivered by our two expert industry trainers – Steve and David.

12 months access to the Online Resource Centre

Plus, all attendees are automatically registered for the Whiteboard Alumni to get regular newsletters and invites to exclusive networking events.

Development outcomes

- ✓ Enhanced critical thinking skills to structure the most complex of decisions, especially in the context of uncertainty.
- ✓ Appreciation of the technical, economic and political influences of decisions (including biases) and their consequences.
- ✓ An understanding of how to articulately present a complex decision, given different futures, to a governance group.

This two day course covers

- **Frameworks for assessing an investment**, including integration with a wider portfolio, and the treatment of uncertainty and risk.
- **The different stages of investment**, from exploration through to commissioning.
- **The differences between transmission and distribution investment decisions**, and generation investment decisions.
- **How to write a good business case** for an investment.
- **The many human factors** that go into making investment decisions.

A great opportunity to gain a deeper understanding of the electricity sector and the complex factors affecting its development, in an engaging format.

Nick Wilson, Mighty River Power

Why Whiteboard Energy

Trainers Steve Batstone and David Reeve have worked in senior roles at the heart of this industry for many years and have an exceptional level of knowledge and passion for this industry. They remain involved in the industry keeping up to date with the latest developments, including the technical and economic aspects. Both have intimate experience of the 'statecraft' that influencers need in order to be effective in the whole

industry and with regulators and politicians.

Both Stephen and David are passionate about mentoring, developing critical thinking skills and encouraging robust discussions to develop clarity of thought. This, with a network of fellow participants and regular updates, gives you the best start in the industry.
